SEWAGE WATER TREATMENT PLANTS

Sewage treatment is a type of wastewater treatment which aims to remove contaminants from sewage to produce an effluent that is suitable for discharge to the surrounding environment or an intended reuse application, thereby preventing water pollution from raw sewage discharges.

Hyper filtration makes Sewage Water Treatment Plants, which, help to make the water free of all types of solids and dissolved harmful matter, and once again safe for consumption.

However, we are a firm who believe in constant research in order to get better results to tackle environmental problems. In-fact, this constant research has lead to a development, wherein, we have paired with Pi-Lo shudh paani sewa , and came up with the idea of Drinking water ATM.

This initiative is a step towards recycling of water, and a huge step in the direction of conserving our resources, for they may run out sooner than we might think. We should all collectively work towards

WHAT IS A PORTABLE SEWAGE TREATMENT PLANT?

Portable Sewage Treatment Plant is one of our product for reusing sewage water in various application. Portable Sewage Treatment Plant is completely based on Membrane Bio Reactor technology for treatment and reuse of sewage water. It gives better treated water quality. Completely automatic plant. Less dependency on manpower.

SALIENT FEATURES OF PORTABLE SEWAGE TREATMENT

- Fully automatic system.
- Compact plant size.
- Energy efficient system.
- The treated water quality is ultra filtered as system is designed on MMTR technology.
- Maximum membrane life.
- Zero Breakdown.
- Customized plant with in house manufacturing and use of only highest quality equipments and Material.
